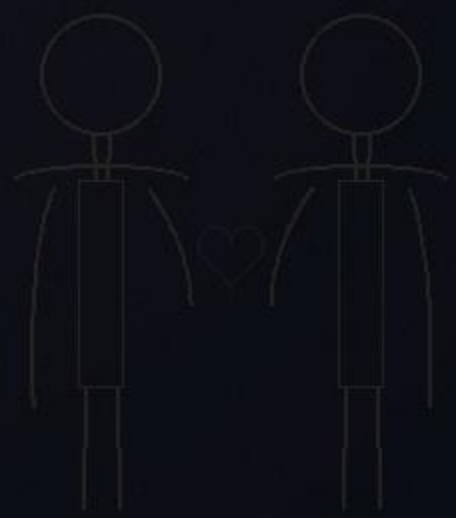
ATTACHMENT

How You Attach Shapes Everything.

The way you learned to connect as a child became the blueprint for every relationship you've had since. The good news: blueprints can be redrawn.

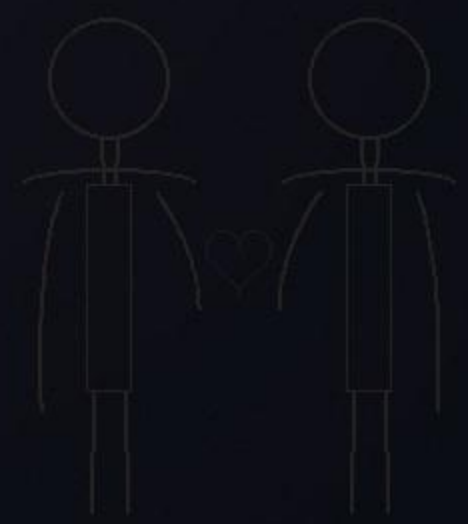
Attachment styles are learned, not fixed.

Anxious, avoidant, disorganized — these patterns developed in response to early relationships. They made sense then. But they often cause pain now, in relationships where they no longer serve you.



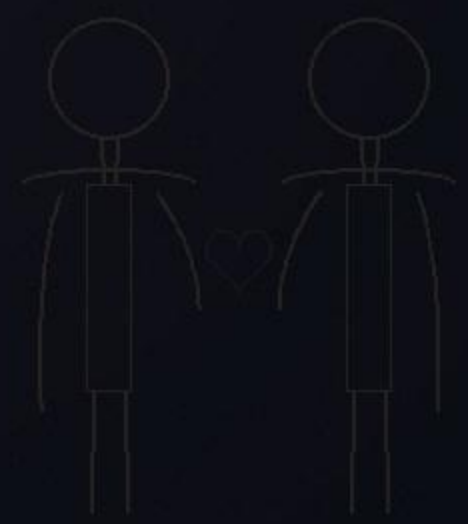
What this looks like in real life.

Anxious: needing constant reassurance. Avoidant: pulling back when things get close. Disorganized: wanting connection and fearing it simultaneously. Sound familiar? You're not broken. You're patterned.



Secure attachment is possible.

Therapy is one of the most researched ways to develop earned secure attachment — learning, through a safe relationship, that closeness is possible without loss of self. This work changes lives.



New patterns of connection are possible.
