# Trauma Lives in the Body.

*Your body remembers what your mind tries to forget. That's not a character flaw — that's neuroscience.*

# *Trauma isn't just memory.*

*It's stored in the nervous system as patterns of tension, hypervigilance, shutdown, and pain — long after the original event has passed. The body keeps the score. He's right.*

# Watch for these signals.

*Chronic tension or pain. Startle responses. Difficulty sleeping. Emotional numbness. Feeling on guard for no clear reason. These aren't personal flaws. They're your nervous system doing its job.*

# Healing is possible. Genuinely.

*Trauma-informed therapy helps your nervous system learn that the threat is over. Slowly, gently, your body begins to trust safety again. Faith adds another layer: the assurance that you are held.*

# You are more than your trauma.

*DM 'HEAL' to learn about trauma-informed sessions.*
